special info (cont'd)

+ followed by a number signifies the extra number of beats added to the loop to ensure it was accurately represented. For example +1 might mean that 1 beat was added before the loop's time starts to make sure a pick up or a flam wasn't cut off from the file. The number after the + always represents beats.

To edit the rex files open them in Propellerhead's Recycle software.

ADVANCED TIP:

Considering that a loop is a block of audio of precise length on the grid a certain tweak is needed to finesse occasional transitions between two loops. For example any sound which rings beyond a bar line (say a ride cymbal) can not possibly ring beyond the loop itself. We have already added artificial rings (which are scarcely noticeable) to any loop which contains a - (minus) sign at the end of the file name which will smooth out most problems caused by this issue. If you find a transition to be of problem you can find two solutions:

1) Use the provided kit to “paint over the transition” as the kit itself will ring beyond the measure bar while the loop changes.

2) In your sequencer cut the proper decay over the bar to smooth the transition.
